

# Shipping and Warehouse Solutions for Everything Else

by Ron Lee, Pacejet at <http://www.pacejet.com>

When you start thinking about streamlining order fulfillment processes, it's important to broaden your focus beyond sales orders to the wider range of order types that you manage with your ERP or other tools. While you may find that some shipping and warehouse processes remain similar across order types, there are transactions, documents, users, and control steps that can be very unique to each type of order. Fortunately, Pacejet can help you centralize and streamline fulfillment for all of your order types using integrated warehouse and shipping tools that automate tasks regardless of the type of order driving a shipping requirement.

Pick Order	iShip	Status	Stage	Fill Rate	Ship Date	Order	Plan Ship	Ship To	Ship To Name	Int Ship To	Carrier	Svc
P001284		Planned	Hold		9/28/2009	MSC123	S000001261	1-001	Coordinated Bicycles		FedEx	2Day

P001287		Planned	Hold		9/28/2009	TRAN000123	S000001264	DIST	Distribution Center		NPME	Standard
P001288		Planned	Backorder		9/28/2009	CUST000124	S000001265	1-000	Wayne Bicycles		UPS	Ground

The Pacejet workbench provides centralized visibility and control for all types of shipments from any type of order including Sales Orders, Blanket Orders, Transfer Orders, FSPlus Service and Repair Orders, Miscellaneous Shipments, or even user-defined custom order types.

One of the more open-ended type of shipping requirements we see with many users, is a “catch-all” shipping option that helps with hard to categorize shipments such as samples or product literature. The Pacejet Miscellaneous Shipments module works well for these types of shipments by providing a fast, adhoc method of entering shipping details without requiring the overhead of entering any type of order in your ERP system. When managing “Miscellaneous Shipments”, users can choose to leverage ERP addresses or item information or can enter adhoc details quickly and easily. Miscellaneous Shipments can be entered via any web browser, saved, re-used as templates or simply submitted for processing where they appear on the Pacejet workbench alongside every other shipment managed by your shipping team.

**Pacejet Miscellaneous Shipments can help you quickly ship samples, literature, gifts or other adhoc shipments with full access to Pacejet shipping methods and tools without entering any type of ERP order.**

Other increasingly common requirements we see in the user community include needs to manage shipping across multiple locations, to manage shipments collected from CRM, e-commerce, or other ERP/accounting applications, or to creatively use functionality

such as Projects to generate orders that drive shipping processes. Pacejet supports these “open shipping” requirements by leveraging XML messaging, flexible order types, and workflow configurations that allow virtually any application to transmit an order to Pacejet for shipment processing. So while you may start today by using Pacejet with an existing ERP, your investment in Pacejet is flexible to allow you to receive and process orders from Microsoft Excel worksheets, from e-commerce or CRM systems, or even from other ERP or accounting systems used by other locations in your corporation now or in the future.

## Feature Sidebar Pacejet now Offers USPS Certified Address Validation that can reduce shipping costs and errors!

ERP-integrated address validation seamlessly scans, validates, corrects, standardizes addresses as they enter your ERP system to reduce lost shipments, avoid carrier charge-backs, and improve reporting and analysis. Key features include:

- ✓ Validates shipping addresses against USPS data
- ✓ Auto corrects zip code and other common errors
- ✓ Validates addresses from EDI/E-commerce orders
- ✓ Seamless background validation and status flag
- ✓ Standardizes addresses for simplified reporting
- ✓ On-Demand service with automatic data updates
- ✓ Pay for only the address corrections you use
- ✓ Standard and open integration for your ERP

Two other examples of flexible order shipping support in Pacejet include Service and Repair Order (SRO) Shipping and support for Transfer Order shipping. SRO shipping features streamline how planned materials are packed and shipped while collecting freight costs and tracking shipments quickly and easily. Transfer Order shipping integrates with ERP Transfer Order processing while leveraging unique Pacejet features such as consolidated packing, automating shipment or ship-receive postings, and using web-accessible dashboards to make transfers fast, efficient, and visible company-wide. As with every type of order processed through Pacejet, shipping teams can easily see SRO and Transfer order shipments on their workbench and can leverage a centralized set of integrated tools for picking, packing, paperwork, labeling, rating, and other shipping tasks.

**Pacejet Service and Repair Order Shipping (FSPlus) streamlines how planned materials are packed and shipped using standard Pacejet tools and automation.**

Take a closer look at the mix of order types that generate shipping requirements in your business. You might be surprised at how much time and energy is tied up in shipping transactions other than those driven by sales orders. With flexible Pacejet shipping and integration options, you can manage every type of shipment more efficiently.

Please give Pacejet a call at 877-722-3538 (877-PACEJET) or send email to [info@pacejet.com](mailto:info@pacejet.com) and we would be happy to talk through your processes and share our thoughts. If you like to read more on your own, then visit us online at <http://Www.Pacejet.Com>.
